OpenEMIS Logistics
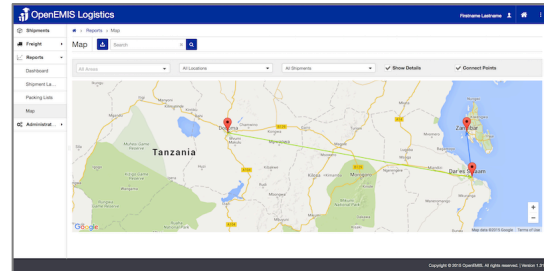

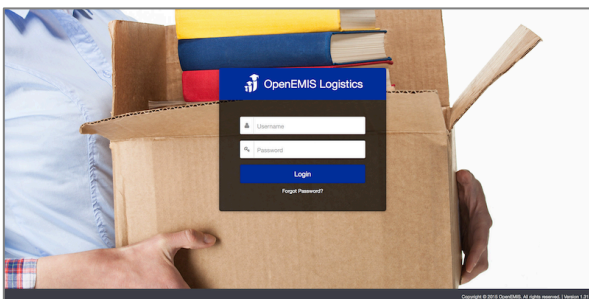

Overview

OpenEMIS Logistics is a web-based application used to track the delivery of items such as textbooks to schools. OpenEMIS Logistics provides access to tracking information such as item types, locations and routes, couriers, and recipients.

Benefits

- ✓ Free and open source software with a mobile responsive interface
- ✓ Fully customizable to meet specific country requirements
- ✓ Interface for couriers and recipients to confirm deliveries
- ✓ Subscribe to SMS and/or email alerts to receive shipment notification messages
- ✓ Define different location, courier and item types such as textbooks
- ✓ Create delivery locations and the routes between locations
- ✓ Compatible with other OpenEMIS products
- ✓ Interactive color coded dashboard to track shipments and display on a map

Features

- ✓ Create shipments with locations, dates, packages and items by quantity / weight
- ✓ Confirm delivery and receipt of freight by couriers and recipients
- ✓ Generate reports, dashboards, shipments labels, packing lists and maps
- ✓ Add areas, locations, items and couriers with custom fields
- ✓ Manage users, subscriptions and system configurations

Requirements

- ✓ Operating system - Linux, Windows or Macintosh
- ✓ Webserver – Apache with PHP or IIS with PHP v5.4
- ✓ Database – MySQL v5, PostgresQL or SQL Server
- ✓ Browser - IE, Chrome, Firefox or Safari
